

Transport Managed Services

Over
70

active sites managed, with thousands of vehicles planned and optimised every day

We have saved

10 – 20%

on transport spend for our current clients, whilst ensuring optimal service levels

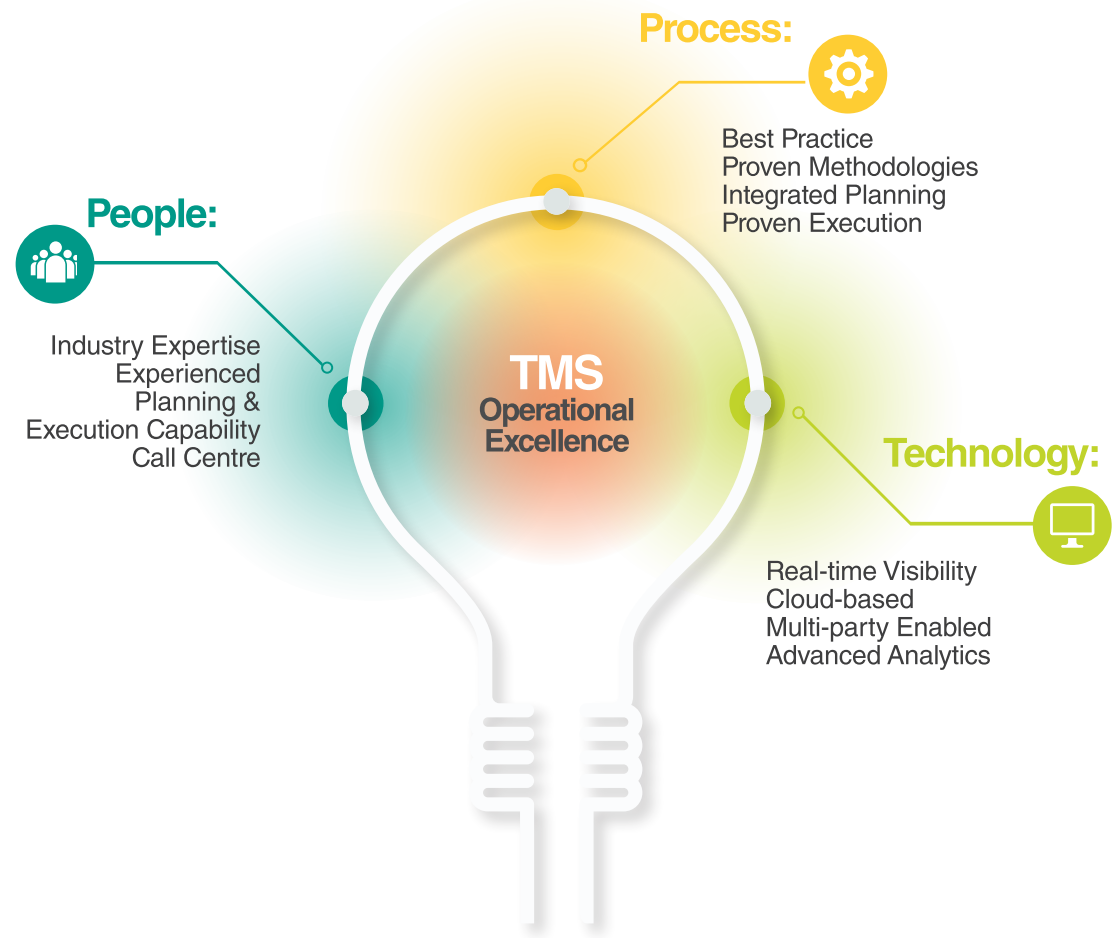

Transportation and distribution of goods has become an increasingly complex and costly operational function. Regulatory factors, economic pressures, and increased services level expectations challenge the traditional approach to transport. New technologies offer solutions, but require specialised skills and processes to deliver benefits.

Resolve provides a total managed service that includes appropriate processes, technology and highly competent people to manage transport and distribution on behalf of our clients.

A Customised Approach

Each solution is custom designed, implemented and operated through a process that focuses on the value drivers within the client's unique environment. Combining our deep operational and subject matter expertise with our proven distribution planning and execution methodology, we deliver measurable value to our clients.

Transport Managed **Services**

Key Solutions Differentiators

- ✓ A pragmatic and customised solution, utilising our operationally experienced team to bring cost and service benefit to our clients.
- ✓ Resolve is willing to discuss alternate revenue mechanisms for our services, including risk or performance linked engagements.
- ✓ We have the scale to handle large scale operations and fleets, and can operate with our equity partner to deliver a complete logistics solution.

Solution Framework

Each solution extends across the entire distribution process, from optimising transport loads, route times and costs, to ensuring alignment with other operational activities. Not only do we focus on transport activities, but aim to optimise the scheduling of resources and constraints at both dispatch and delivery – we offer a full logistics planning solution!

Transport Managed Services

Transport Planning and Optimisation

Order management, prioritisation and consolidation along with implementation of delivery frequency and minimum order quantity rules, always aligned with business objectives.

System-driven route optimisation that delivers optimal route plans that are cost focused but yet operationally achievable.

Development of business forecast into tactical transport and network plan.

Translation of operational and business requirements, costs, and service targets into solution design and setup.

Influence yard activities, including buying, warehouse picking and loading requirements.

Resource Allocation and Scheduling

Optimised planning allows for better utilisation of vehicles.

Scheduling of resources is enabled by a daily planning function.

Long term procurement enablement through improved forecast and planning.

Transport Execution Management

System based management of transport and transport exceptions, linked to vehicle tracking and optimal route milestones.

Continuous adjustment and proactive response to actual transport events, through highlighted exceptions and variations from plan.

Pro-active notifications via email and SMS to destinations on both plan and revised "live" expected arrival times.

Key Benefits

Optimal total cost benefits

Proper plan execution & resolution of plan deviations

Improved service quality

Operational standardisation & simplification

Visibility & measurement of planned & executed activities

Reduced carbon footprint

Extensive real life operational experience

Transport Managed Services

A Pedigree for Success

With our proven distribution planning and execution framework, we deliver **measurable value** to our clients who trust us to manage and execute on their behalf.

Continuous Improvement and Analytics

Continuously identify critical operational constraints and focus on improving/mitigating these constraints.

Constant evaluation and assessment on transport activities and associated costs.

Reporting portal available 24/7 to clients through web interface.

3PL Management

Management of third party service providers and associated activities, governed by agreed KPI's.

Rate and contract negotiations with transport partners and/or internal logistics role players.

External supplier and internal vendor contract management.

Performance Management

Identify appropriate performance metrics, specific to clients environment.

Create visibility of TMS and related supply chain planning and operations.

Identify improvements in related supply chain functions that impact performance or constrain potential optimisation in transport performance.
